4465 Torrence Place, Woodbridge, Virginia 22193

EDUCATION

The University of Virginia

Class of 2028

Major: Bachelor of Data Science (BSDS), Analytics and Systems Concentration

Minor: General Business

Relevant Organizations

BlackFin Investment Group

Charlottesville, Virginia

Senior Analyst

September 2024 - Present

- Selected through a competitive application and interview process to join BlackFin, an investment group for minority students pursuing careers in finance or general business knowledge.
- Attended weekly meetings and technical workshops and networking events focused on financial modeling, research, and career preparation, led by professionals and alumni.
- Received mentorship and career guidance from upperclassmen and alumni in investment banking, management, consulting, and financial literacy.

Work Experience

Soccer Referee

October 2022 – Present

- Licensed U.S. Soccer Referee with experience officiating 110+ competitive matches across age groups U10–U19.
- Exercised quick decision-making and conflict resolution skills under pressure by communicating rules and calls clearly to players, coaches, and spectators.
- Maintained fitness and focus to manage up to 6 back-to-back matches, demonstrating reliability and endurance.
- Collaborated with assistant referees and league officials to ensure smooth match operations.

Robertson Media Center

August 2026 – Present

Consultant

- Supported patron project success by consulting with faculty, staff, and students on equipment and software selection for video, audio, 3D, and VR/AR projects
- Delivered high-quality customer service by staffing the front desk and floor during open hours, ensuring consultants were available to assist walk-in patrons.
- Maintained well-organized equipment inventory through accurate checkout, return, and tracking of multi-piece media gear.

Projects

Used-Car Market Intelligence & Deal Analyzer Web App

August 2026 - September 2026

- Built a full-stack platform that ingests used-car listings and provides ML-powered fair-value estimates, market comparisons, and a 0–100 Deal Score for identifying potentially underpriced vehicles.
- Developed an end-to-end scikit-learn valuation pipeline with automated data processing, feature engineering, model inference, and REST APIs connecting the ML system to an interactive React dashboard.
- Implemented automated deal analysis, database persistence, filtering, and 127 backend tests to deliver a reliable, production-style vehicle analytics application.

Air Fryer Market Demand Estimation

May 2026

- Built a logit-style demand model via linear regression to estimate how price, ratings, and features drive market share across 10 brands (2019–2023).
- Derived brand-level markups and unit costs by applying estimated price elasticity to a firm's pricing condition.
- Translated model outputs into pricing and product strategy insights via a summary deck.

Weather API Chatbot

January 2026

- Built an API using Flask that classifies temperature values and returns descriptive weather messages in JSON format
- Implemented API endpoints for temperature queries and system health checks
- Containerized the application with Docker and created a one-command run.sh script to build and deploy the API locally
- Designed the service to be stateless with input validation and error handling for invalid or missing temperature parameters

AWARDS & HONORS

Davis First Generation Scholarship:

Awarded to chosen students that identify as the first in their family to attend higher education.

SKILLS

Languages: Python, Linux, Java, SQL

Libraries/Frameworks: Pandas, Matplotlib, Seaborn, Flask, JSON

Developer Tools: Git, Github, VSCode, Cursor, Pycharm, Google Colab, Anaconda, Azure, Positron
